

HeraPur[®]

K-0264

Catalyst type K-0264 is a Palladium catalyst on an alumina support with high surface area. It can be used for a variety of applications in gas purification.

Pd-content	0.05 – 0.5 wt. %
Particle size spheres	2 – 4 mm
Pore volume	approx. 0.5 ml/g
BET surface area	approx. 250 m ² /g

Loading

This catalyst type is available with different Pd-concentrations from 0.05 – 0.5 wt. %

Application

High purity gas, CO₂-purification,
Inert gas-purification, VOC abatement

Packing

210-liter steel drums or in 120-liter plastic drums

Shelf life & Storage

HeraPur[®] can be stored indefinitely in its original, sealed drums, provided the drum is kept in a non-corrosive atmosphere and ambient temperature, for example in a warehouse or other storage facility

Service

HeraPur[®] contain valuable precious metals and can be returned to Heraeus after usage for recycling of the metals
